Week 43 Highlights

The weekly Influenza Watch summarizes the flu surveillance in the City of Cleveland. The metrics in this report include the number and percentage of emergency department visits for influenza-like illness, confirmed hospitalizations for the flu, and the deaths each week due to pneumonia and influenza.

- This week, flu activity remains “Low”
- 14.4% of the 313 deaths reported were due to pneumonia. No influenza deaths were reported this week and there have been no influenza deaths so far this season.
- There were 0 confirmed cases of influenza-associated hospitalization were reported this week. 1 hospitalizations due to the flu were reported this season
- 1.45% of emergency department visits were for flu-like illness
- Influenza A remains the predominant strain. The vaccine remains a good match for the current circulating strain of Influenza A.

*Deaths represent all deaths for Cuyahoga County. All other data presented are City of Cleveland-specific. Data are preliminary and subject to change as more information is gained. The three indicators for calculating the intensity thresholds are based on 2017 methodology from the Centers for Disease Control and Prevention.
The proportion of Emergency Room visits this week for influenza-like illnesses is under the low threshold and lower than the 5-year average. This week 60% of visits were among males. Regarding race and ethnicity, 39% of visits were Black or African American individuals; 23% were among White individuals; and 38% of visits were among other racial groups. 30% of visits were among Hispanic or Latin individuals. The median age this week is 8 years.

Low, Moderate, and High intensity thresholds are defined as the 50%, 90%, and 99% Confidence Intervals, respectively, based on the 5-Year Average of previous seasons.
Influenza-associated Hospitalizations

The number of hospitalizations remains very low compared to what has been observed over the past 5 years. Influenza A is the predominant strain currently, which was observed among all of cases this week. This week there were not any influenza-associated hospitalizations keeping the season total at 1.

Data Source: Ohio Department of Health: Ohio Disease Reporting System. Data extracted on 11/4/2021. Data are preliminary and subject to change as more information is gained.

Low, Moderate, and High intensity thresholds are defined as the 50%, 90%, and 99% Confidence Intervals, respectively, based on the 5-Year Average of previous seasons.
Pneumonia- & Influenza-Associated Deaths*

There have been 45 deaths this season due to pneumonia or influenza-related illnesses (P&I). The proportion of P&I deaths is 2-fold over the very high threshold this week. This is likely because of COVID-19 deaths that had pneumonia complications. This week, the data shows there was not an influenza specific-related death. The majority P&I deaths that occurred this season were among individuals aged 45 years and older.

Data Source: Cleveland Department of Public Health Department of Vital Statistics. Data compiled on 11/4/2021. Data are preliminary and subject to change as more information is gained.
