

WEEK 9: FEBRUARY 25 - MARCH 2, 2024

Week 9 Highlights

The weekly influenza watch summarizes the flu activity in the City of Cleveland. The metrics in this report include the number and percentage of emergency department visits for influenza-like illness, confirmed flu hospitalizations, and deaths each week due to pneumonia or influenza.

- This week, flu activity is classified as "Moderate"
- 2.30% of emergency department visits were for flu-like illness
- There were 43 confirmed cases of influenza-associated hospitalizations reported this week. There have been 532 influenza associated hospitalizations so far this season
- 3.69% of deaths reported were due to pneumonia. One influenza death was reported this week and there has been 15 influenza deaths so far this season

Flu Intensity: Moderate

Influenza & COVID-19 Intensity Indicators	This Week n (%)	Activity Compared to Last Week	Season Total n (%)
Emergency Department visits for Influenza-like Illnesses	95 (2.30%)	-0.02%	1,726 (1.94%)
Confirmed Influenza Hospitalizations	43	-1	532
Confirmed COVID-19 Hospitalizations	11	+6	177
Pneumonia- & Influenza- related Deaths	11 (3.69%)	-2.39%	363 (5.42%)

^{*}Deaths represent all deaths for Cuyahoga County. All other data presented are City of Cleveland-specific Data are preliminary and subject to change as more information is gained.

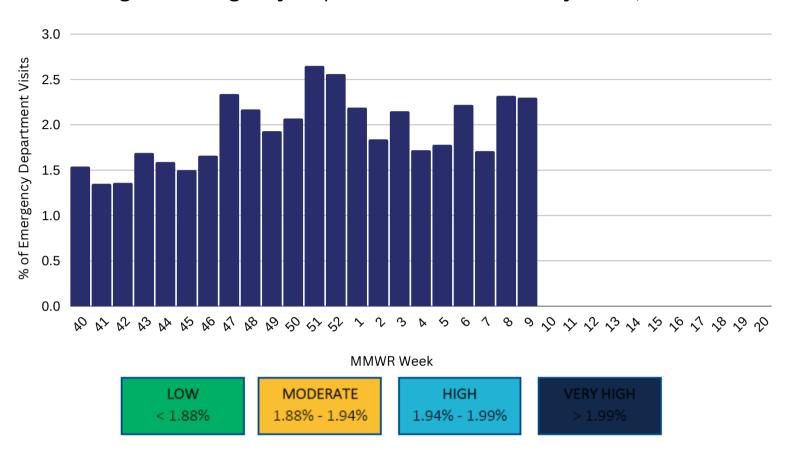

The three indicators for calculating the intensity thresholds are based <u>on 2017 methodology from the Centers for Disease</u> Control and Prevention.

WEEK 9: FEBRUARY 25 - MARCH 2, 2024

Influenza-like Illnesses (ILI)

Percentage of Emergency Department visits for ILI by Week, 2023-2024

The proportion of Emergency Room visits for influenza-like illnesses is above the very high threshold and comparable to the 5-years average. This week, 52% of the visits were among males. Regarding race and ethnicity, 36% of visits were Black or African American individuals; 21% were among White individuals; and 43% of visits were among other racial groups. A little over than third (39%) of visits were among Hispanic or Latin individuals. The median age this week is 6 years.

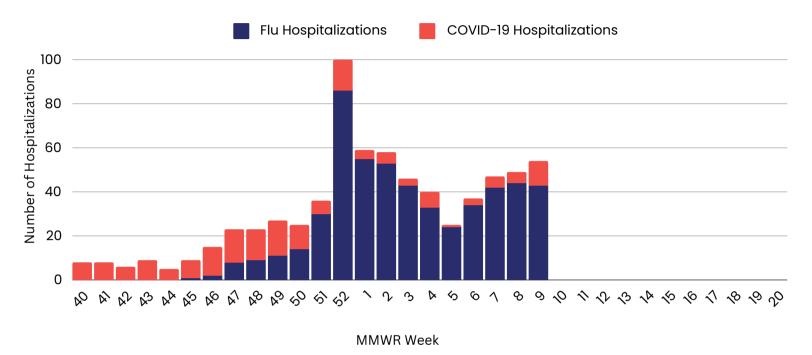

^{*}Data Source: Health Monitoring Systems: EpiCenter 3.5.18. Data extracted on 5/21/2024. Low, Moderate, and High intensity thresholds are defined as the 50%, 90%, and 99% Confidence Intervals, respectively, based on the 5-Year Average of previous seasons

WEEK 9: FEBRUARY 25 - MARCH 2, 2024

Influenza and COVID-19 Hospitalizations

Number of Flu and COVID-19 Hospitalizations by Week, 2023-2024

There have been 43 influenza-associated Hospitalizations (IAH) reported this week among individuals aged 5 month to 87 years. The majority of these hospitalizations were among residents 60 years of age and older. This is roughly 50% higher than the number of hospitalizations than expected at this point in the year based on the 5-year average. This brings the total influenza-associated hospitalizations for the season to 532. Influenza has accounted for more hospitalizations than COVID-19 this fall. The number of COVID-19 hospitalizations has decreased from the previous week, with five hospitalizations reported during this reporting week.

based on the 5-Year Average of previous seasons.

Low, Moderate, and High intensity thresholds are defined as the 50%, 90%, and 99% Confidence Intervals, respectively,

WEEK 9: FEBRUARY 25 - MARCH 2, 2024

Pneumonia- & Influenza - Associated Deaths*

Percentage of Deaths due to Pneumonia or Influenza by Week, 2023-2024

There have been 11 deaths this reporting week due to pneumonia or influenza related illnesses (P&I). The proportion of P&I deaths is in the low threshold this week. This week, the data shows there was one influenza-associated death, which brings the season total to 15. Also, there have been 12 COVID-19 associated deaths thus far in the same period. The majority P&I deaths that occurred this week were among individuals aged 25 years and older.
